

Drone Detection & Airspace Intelligence for Correctional Facilities

The Drone Reality

100M+

Of contraband smuggled
into prisons annually,
often using drones

350+

Drone incursions across
U.S. military installations
in a single year

1,800+

Drone-related safety
incidents reported
through the FAA's ASRS
system

Drone flights pose new challenges for correctional facilities. They are increasingly used for contraband delivery and covert surveillance, and they can endanger inmates, staff, and the surrounding communities.

SkySafe helps secure your perimeter with precise data on flight paths, drone behavior, and pilot position.

You Can't Protect What You Can't Detect. SkySafe Helps Correctional Facilities:

Secure Perimeters - Protect prison yards and detention centers by detecting drones before they infiltrate restricted areas.

Locate Drone Operators - Get instant notifications that include pilot locations to enable rapid ground response.

Block Contraband and Surveillance - Stop dangerous contraband drops and prevent surveillance that could enable escape attempts.

“

“Before SkySafe, we relied solely on line of sight. We would try to track where a drone landed and send officers to find the pilot, but I can count on one hand the times we succeeded. It was all down to luck - identifying offending operators by line of sight is nearly impossible.”

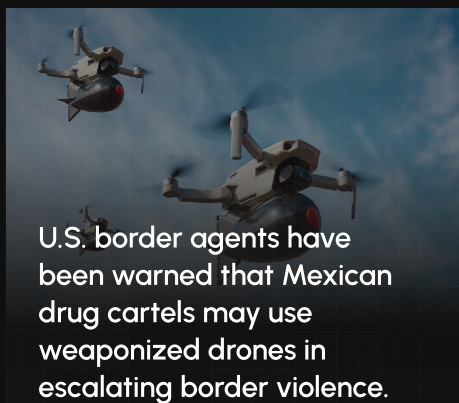

Captain Joe McCullough
University of Illinois Police Department

Prison Airspace Violations Are Happening Every Day.

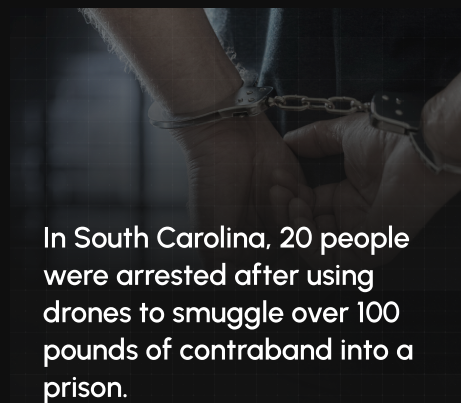

Drones create new challenges for both correctional facilities and the communities they protect.

150 people arrested in bust of ring using drones to smuggle drugs and guns into Georgia prisons

U.S. border agents have been warned that Mexican drug cartels may use weaponized drones in escalating border violence.

In South Carolina, 20 people were arrested after using drones to smuggle over 100 pounds of contraband into a prison.

These aren't isolated incidents—they're part of a troubling trend. **But SkySafe can help.**

How SkySafe Works

Detect

Set up perimeters and receive instant alerts about drones in your restricted airspace.

Analyze

Analyze flight patterns, altitude, and pilot position to quickly respond and apprehend suspects.

Act

Get prosecution-ready forensic reports containing decrypted logs and geolocation data.

Prevent Unknown Drones Before They Reach The Prison Yard.

Secure your perimeter both on the ground and in the air. SkySafe's drone detection and airspace intelligence platform can help your organization protect prison staff, inmates, and the surrounding communities.
